

Farymann North America

Power range

Diesel: 5.3 hp to 100 hp

New Engines

In 2010, Greaves Farymann introduced the model 55W, a two-cylinder, 902 cc, water-cooled, direct-injection diesel. The engine is rated 19 hp at 3000 rpm and is 17.5 in. high with the cylinders inclined 15° from horizontal. This engine is being targeted for new and current military applications.

The company also said it is planning to launch two, 4.5 L four-cylinder diesel engines. The 275WT/WTA turbocharged engine models target the power generation markets and have power outputs of 74 and 100 hp at 1500/1800 rpm. Both basic engines are delivered with 12V electrics, mounted air filter, cooling system and flex exhaust connection.

The next step will be two 3.4 L, three-cylinder diesel engines, Greaves Farymann said. These engines currently meet Euro Stage 2 regulations without the use of electronic fuel injection and external exhaust after treatment, the company said. Farymann North America is currently targeting generator packagers for export sales outside of North America.

Emissions

Greaves Farymann's EPA certified Tier 4 current lineup includes the following models: the 18D/18W air- and water-cooled, single-cylinder model rated 7 hp at 3600 rpm; and the 43F/43W air- and water-cooled single-cylinder diesel rated 14.7 hp at 3000 rpm.

Corporate Developments

Farymann North America, Greenville, S.C., is the Greaves Farymann Diesel industrial and marine engine distributor for North America and Mexico. The Greaves Farymann Diesel GmbH factory is located in Lampertheim, Germany.
