

MANN+HUMMEL IQORON The new compact air cleaner for high requirements

IQORON : An intelligent solution

The newly developed IQORON air cleaner series from MANN+HUMMEL meets current and future requirements for greater air throughput and reduced installation space and is therefore the ideal solution for demanding applications.

Variations of the IQORON series

Advantages at a glance:

- low space requirement through compact design
- long filter service life through highly efficient multi-cyclone block precleaner and the CompacPleat double-bellows element
- highest reliability through filter element with axial seal and additional secondary element with radial seal
- inline air flow enables numerous installation possibilities

- easy monitoring of the dirt accumulation level through integrated connection for service switch
- cleaning of multi-cyclone block made easy through central fixing screw
- eco-friendly disposal of metal-free filter element (fully incinerable)
- problem-free fitting to different units through variable installation positions
- quick first-fit through various fixing possibilities

Target applications

The power pack: with a high power density and long service life

Dimensions and part numbers on pages 8 - 9.

IQORON-V

High performance cyclone technology – also without scavenging

Dimensions and part numbers on page 14.

IQORON-S

The single-stage filter for low pressure drop

Dimensions and part numbers on page 15.

Pre-separation through high performance cyclone technology

IQORON multi-cyclone block

A more efficient precleaner leads to a longer filter service life and as a result it is not necessary to change the filter element as often – an advantage which has an immediate effect on the economy of the machine.

The best and most technically advanced solution is achieved by the connection in parallel of many small, separate precleaner cells in a multi-cell separator, the so-called multicyclone block. The multi-cyclone block of the IQORON from MANN+HUMMEL with its pre-cleaner cells is a real filtration highlight with an efficiency of more than 95%. Compared to a conventional standard two-stage filter with a pre-separation efficiency of 85%, the IQORON multicyclone block offers dust preseparation which is 3 times as effective.

New CompacPleat filter element

The core of the IQORON is the newly developed MANN+HUMMEL

CompacPleat double-bellows element. In comparison to a conventional filter element in the same installation space the CompacPleat has a considerably larger surface area. In addition, the air cleaner with its linear air flow allows numerous installation possibilities. The metal-free filter element is easily disposed of by incineration and therefore eco-friendly. The element carrier frame (if available) is re-used which makes it only necessary to change the filter insert with the integrated seal. In this way the IQORON is able to make a contribution towards conservation of resources.

IQORON: An intelligent solution

The inline concept of the IQORON

A filter for tight installation conditions

A size comparison with a conventional filter and same service life shows: IQORON saves valuable installation space!

Details

Connection service switch/ service indicator

The IQORON filter housing has an integrated M10x1 threaded connection for a service switch or indicator. Further parts are not required. We recommend the use of a MANN+HUMMEL service switch or indicator to monitor the dirt level. If a service switch is not used, the connection is sealed to be dust-tight using the supplied protection cover.

Fixing

Fixing to the bracket can be made using the through-hole or also using an M8 threaded insert. This removes the need for washers and nuts and considerably shortens the time required for the firstfit of the filter to the vehicle.

Secondary element

The IQORON is equipped with a separate secondary element so that the cleaner can also perfectly protect the engine while servicing the main element.

This secondary element is perfectly positioned for the flow behind the filter element and has its own radial seal for the housing. This prevents the ingress of dirt in the intake system even when the main element is removed or damaged through inappropriate handling. The IQORON secondary element is also metal-free and therefore eco-friendly and fully incinerable.

Installation and maintenance

Servicing the pre-separator

If particularly unfavourable application conditions occur (e.g. simultaneous ingress of large amounts of dust particles and water) and the pre-separator does block, then it can be easily and quickly serviced: After unscrewing the central holding screw the cyclone block is removed from the housing and cleaned either with compressed air or by washing out.

Changing the filter elements

Step 1 Remove the cover.

Step 2 Now remove the main element.

Step 3 Dispose the used element.

Step 4 Now there is access to the secondary element, which must also be changed regularly.

IQORON 10,12 and 14

Step 1 Remove the cover.

Step 2 Undo the lever by pulling towards the clean air side (see arrow).

Step 3 Now remove the main element together with the frame.

Step 4 Dispose the used element and re-use the frame.

Step 5 Now there is access to the secondary element, which must also be changed regularly.

Continuous scavenging

The following pictures show the different possibilities of how to realise dust removal through scavenging. To guarantee reliable, problem-free running of the IQORON it is necessary to continuously scavenge the pre-separator of the air cleaner. This removes the pre cleaned dust from the pre-separator and avoids deposits building up which otherwise lead to a considerable reduction in efficiency and service life. The condition for reliable dust scavenging is a negative pressure of at least 8 mbar via the preseparator with a nominal volume flow of the filter. To determine the required total negative pressure, it is necessary to include the pipe resistance values of the raw air pipe and scavenging pipe. If there is any uncertainty we recommend measurement of the actual negative pressure present.

Scavenging using a blower

The engine cooling fan can be used for the scavenging provided the negative pressure generated is at least 8 mbar. This is usually the case with modern engine fans which at the present time generate a negative pressure of up to 20 mbar. Alternatively, the use of a special suction fan is possible, for example mechanically driven with a V-belt or electrically driven.

Scavenging with an integrated ejector

A frequently used space saving alternative is to use an exhaust ejector in the silencer of the exhaust pipe to eject the pre cleaned dust back into the environment together with the engine exhaust fumes.

Scavenging with MANN+HUMMEL ejector fitted downstream

The scavenging can be easily realised using the proven MANN+HUMMEL ejectors which are installed downstream of the silencer. The integrated venturi tube generates the required negative pressure. A pipe connects the IQORON to the ejector and the separated dust is blown out of the exhaust pipe. When using exhaust ejectors care should be taken that the permissible exhaust back pressure is not exceeded.

IQORON

Dimensions and part numbers

In order to ensure ideal dust discharge in varying positions, the IQORON is available with three different orientation directions for the dust scavenging connection. The best separation efficiency is achieved when the dust discharge port is pointed downwards. If the direction deviation of the dust discharge port to the vertical is more than 45°, the next port position should be used.

IQORON-V/S

The IQORON-V is a twostage filter. "V" stands for dust discharge via a valve.

The IQORON-S is a singlestage filter. "S" stands for "single stage". It is suitable for applications which require a low pressure drop in the filter system – e.g. in compressors.

The clever design means it is possible to convert an IQORON-S into an IQORON-V at any time. This is achieved just by replacing the raw air grid of the single-stage filter with the cyclone precleaner. All the mounting points and clean air hoses remain intact. The reverse changeover works in exactly the same way. And of course the **IQORON-V** and **IQORON-S** are both equipped with CompacPleat elements from MANN+HUMMEL.

This allows a compact design with low pressure drop and a high simultaneous dust holding capacity.

The new IQORON-V/S filters are suitable for all applications where high filter performance is required in a small installation space, for example with construction machines such as compact loaders and backhoe loaders, for tractors, forklifts, mobile and stationary compressors and for numerous other applications.

Advantages at a glance:

- oval design allows use in extremely tight installation spaces
- inline air flow enables space-saving fitting concepts
- high filtration performance
 - easy element change
 - without obstructive hinge mechanics
- version as two-stage filter with long service life or as single-stage filter with low initial pressure drop

Housing made from fibre-glass reinforced

IQORON-V Two-stage filter

The IQORON-V is the ideal filter for all machines which require high reliability under heavy dust conditions. These are, for example, construction and agricultural machines and mobile compressors. Other applications also include machines and vehicles in horticulture and landscaping, as well as forklifts. The cyclone pre-separator offers excellent pre-separation. The IQORON-V achieves a pre-separation efficiency of 95% with scavenging and 90% without scavenging (with SAE coarse). Two different positions for the dust discharge port enable the filter to be fitted in a vertical or horizontal position. The precleaner can easily be cleaned should it become clogged during operation.

IQORON-S Single-stage filter

The IQORON-S is suitable for use with all applications where very low pressure drop is a requirement. This is naturally especially true for compressors, but also includes stationary engines used for energy generation and machines which operate in low dust conditions. This is where the IQORON-S shows its strength – with a very low pressure drop.

The IQORON-S can be converted to an IQORON-V at any time if the dust conditions make this necessary: simply remove the raw air grid and replace it with the precleaner.

Filter housing

The housing is made from especially robust, fibre-glass reinforced plastic. This choice of material offers advantages with regard to the possible mechanical stress load and operating temperatures. As a result the IQORON-V/S can be used continuously with temperatures up to +90 °C and for a short time with temperature peaks up to +110 °C. The service switch or indicator can be mounted directly to the housing. In addition, the mounting possibilities are available in the standard version. The customer can choose between M8 threaded inserts or through-holes for M8 screw.

IQORON-V installation positions

The IQORON-V is available in two versions: for a horizontal or vertical fitting position. During installation make sure that the angle deviation of the dust valve to the vertical is not more than 15°. If the filter is operated with scavenging, a deviation of max. 45° to the vertical is permissible.

Notes

MANN+HUMMEL Group

The MANN+HUMMEL Group is an international company with its headquarters in Ludwigsburg, Germany. The group employs approx. 11,500 people worldwide at more than 41 locations.

The company develops, produces and sells technically complex components for the automotive and other industries. A key area is high quality filtration products for vehicles, engines and industrial applications. The OEM business with global market leaders and producers of vehicles, machines and installations defines the quality and performance of the group. Filters for the international aftermarket are sold under numerous international brands as well as under the MANN-FILTER brand.

MANN+HUMMEL Industrial Filters

The Industrial Filters Business Unit with its headquarters in Speyer, Germany is specialised in meeting the requirements of off-highway vehicle and engine applications, compressed air and vacuum technology, mechanical engineering and plant construction. For these and other industrial fields MANN+HUMMEL Industrial Filters offers high performance products for the filtration and separation of air, gases and liquids.

MANN+HUMMEL GMBH, Business Unit Industrial Filters 67346 Speyer, Germany, Telephone +49 (62 32) 53-80, Fax +49 (62 32) 53-88 99 E-Mail: if.info@mann-hummel.com, Internet: www.mann-hummel.com
